Official Candidate Response Sheet & Detailed Answer Key Analysis

ASSESSMENT REPORT

Candidate Name:	Aarav Sharma	Final Score:	12 / 32 (37.5%)
Candidate Email:	aarav.sharma@example.com	Candidate Rank:	#3 of 45
Assessment Title:	JEE Advanced 2026 Grand Mock Assessment	Accuracy:	37.5%
Submitted At:	08 Oct 2026, 08:53 PM IST	Total Time Spent:	7m 0s

Correct: 3		Incorrect: 3		Skipped: 2		Marked for Review: 1		Total Questions: 8
------------	--	--------------	--	------------	--	----------------------	--	--------------------

SECTION-WISE SUMMARY & PERFORMANCE

Section Name	Questions	Marks Obtained	Correct	Incorrect	Skipped
Physics - Section A	2	6 / 8	1	1	0
Physics - Section B	1	4 / 4	1	0	0
Chemistry - Section A	2	3 / 8	1	1	0
Chemistry - Section B	1	-1 / 4	0	1	0
Mathematics - Section A	1	0 / 4	0	0	1
Mathematics - Section B	1	0 / 4	0	0	1
Total	8	12 / 32	3	3	2

QUESTION-BY-QUESTION EVALUATION & CANDIDATE RESPONSES

Question 1 · Section: Physics - Section A · Single Correct MCQ: CORRECT Marks: +4 Time: 35s
A particle moves along the x-axis such that its position is given by $x(t) = 3t^2 - 12t + 4$. At what time is the particle momentarily at rest? (A) $t = 1$ s (B) $t = 2$ s [· CANDIDATE SELECTED & CORRECT] (C) $t = 3$ s (D) $t = 4$ s Candidate Answer: Option B Official Key: Option B Result: CORRECT (+4) Explanation & Solution: $v(t) = dx/dt = 6t - 12 = 0 \Rightarrow t = 2$ s.

Question 2 · Section: Physics - Section A · Multi-Correct MCQs: PARTIAL MARKS | Marks: +2 | Time: 1m 10s

Which of the following statements are correct for an ideal inductor connected to an alternating voltage source $V = V_0 \sin(\omega t)$?

- (A) The current lags voltage by $\pi/2$ [**SELECTED & CORRECT**]
 (B) The current leads voltage by $\pi/2$
 (C) Average power consumed over a complete cycle is zero [**CORRECT KEY (NOT SELECTED)**]
 (D) Inductive reactance is inversely proportional to frequency

Your Selected: [A] | Official Correct Key: [A, C]

Outcome: Partial marks awarded: +2 (Selected 1 of 2 correct options, 0 incorrect).

Explanation & Solution: Current in a pure inductor lags the applied voltage by 90 degrees. Average power is $\langle P \rangle = V_{rms} * I_{rms} * \cos(\pi/2) = 0$.

Question 3 · Section: Physics - Section B · Numerical Answer: CORRECT | Marks: +4 | Time: 50s

A ball of mass 0.5 kg is dropped from a height of 20 m. Taking $g = 10 \text{ m/s}^2$, determine its velocity just before hitting the ground in m/s.

Your Answer: 20.00

Correct Answer: 20

Status: CORRECT | Marks Awarded: +4 / 4 | Rule: Integer / Decimal (· 2 places)

Explanation & Solution: $v = \sqrt{2gh} = \sqrt{2 * 10 * 20} = \sqrt{400} = 20 \text{ m/s}$.

Question 4 · Section: Chemistry - Section A · Match the Column: CORRECT | Marks: +4 | Time: 1m 5s

Match the substances in Column I with their characteristic properties or pH classifications in Column II based on the provided experimental table.

Original Matching Table (from PDF Source):

Column I	Column II
A. Acidic	P. $\text{pH} < 7$
B. Basic	Q. $\text{pH} > 7$

- (A) A-Q, B-P
 (B) A-P, B-Q [**CANDIDATE SELECTED & CORRECT**]
 (C) A-P, B-P
 (D) A-Q, B-Q

Candidate Answer: Option B | Official Key: Option B | Result: CORRECT (+4)

Explanation & Solution: Acids exhibit $\text{pH} < 7$ (P), whereas bases exhibit $\text{pH} > 7$ (Q). Hence A-P, B-Q.

Question 5 · Section: Chemistry - Section A · Multi-Correct MCQ · Answer: INCORRECT | Marks: -1 | Time: 1m 20s

Which of the following molecules possess a planar molecular geometry?

- (A) BF_3 [· SELECTED & CORRECT]
- (B) XeF_4 [· CORRECT KEY (NOT SELECTED)]
- (C) C_2H_4 [· CORRECT KEY (NOT SELECTED)]
- (D) CH_4 [· SELECTED - WRONG]

Your Selected: [A, D] | Official Correct Key: [A, B, C]

Outcome: Wrong option selected (D). Penalty applied: -1 marks.

Question 6 · Section: Chemistry - Section B · Numerical Answer MCQ · Answer: INCORRECT | Marks: -1 | Time: 1m 30s

Calculate the percentage purity of a sample of CaCO_3 if 2.00 g of it on heating yields 0.88 g of CO_2 gas. (Molar masses: $\text{CaCO}_3=100$, $\text{CO}_2=44$).

Your Answer: 66.67

Correct Answer: 100.00

Status: INCORRECT | Marks Awarded: -1 / 4 | Rule: Integer / Decimal (- 2 places)

Explanation & Solution: Moles of $\text{CO}_2 = 0.88/44 = 0.02$. Moles of pure $\text{CaCO}_3 = 0.02 \Rightarrow \text{mass} = 2.0$ g. Purity = $(2.0/2.0)*100 = 100\%$.

Question 7 · Section: Mathematics - Section A · Single Correct MCQ · Answer: SKIPPED / NOT ATTEMPTED | Marks: 0.00 | Time: 15s

Find the value of the integral $\int_0^{\pi/2} \sin^2(x) dx$.

- (A) π
- (B) $\pi / 2$
- (C) $\pi / 4$ [· OFFICIAL CORRECT OPTION]
- (D) 0

Candidate Answer: None (Not Attempted) | Official Key: Option C | Result: SKIPPED / NOT ATTEMPTED (0.00)

Explanation & Solution: By symmetry, $2I = \int_0^{\pi/2} 1 dx = \pi/2 \Rightarrow I = \pi/4$.

Question 8 · Section: Mathematics - Section B · Numerical Answer MCQ · Answer: SKIPPED / NOT ATTEMPTED | Marks: 0.00 | Time: 15s

Determine the radius of curvature at the origin for the curve $y = 2x^2 + 3x$.

Your Answer: Not Attempted

Correct Answer: 2.5

Status: SKIPPED / NOT ATTEMPTED | Marks Awarded: 0.00 / 4 | Rule: Integer / Decimal (- 2 places)

Explanation & Solution: $R = (1 + (y')^2)^{3/2} / |y''|$. At $x=0$, $y'=3$, $y''=4 \Rightarrow R = (1 + 9)^{3/2} / 4 = 10\sqrt{10}/4$.
